- Download Android X86 iso image of choice from http://www.android-x86.org/download
- Boot ISO in Hyper Visor of choice. (Android will work in VMWare, VirtualBox and Hyper-V)
- Install any GPS, Accelerometer, orientation etc spoof daemons of choice

Android Debugger Bridge

- Once Android is booted (first time), run terminal (on Android) and issue commands below
    - setprop service.adb.tcp.port 5555
    - stop adbd
    - start adbd
    - or adb tcpip 5555
- From Development PC (issue commands via CMD – adb can be found in platform-tools folder in you Android SDK folder):
    - adb connect [Android emulator ip address] - if ip not known from Android terminal command: (busybox ifconfig)
- Connect as normal emulator from Visual Studio.   Should appear as Hyper Visor name, ie VMWare etc
